#0080: Slowbro

→

Slowpoke (Japanese: ヤドン Yador) is a dual-type Water/Psychic Pokémon introduced in Generation I. It evolves into Slowbro starting at level 37 or Slowking when traded while holding a King's Rock. In Galar, Slowpoke has a pure Psychic-type regional form, introduced in Pokémon Sword and Shield's 1.1.0 patch. It evolves into either Galarian Slowbro when exposed to a Galarica Cuff or Galarian Slowking when exposed to a Galarica Wreath. These Slowpoke can also be found in Blueberry Academy's Terarium. (Specifica may differ in past games. Refer to Game data - Evolution data for these details.)

Data Sources

Our information system will be based on a well known source: **Bulbapedia**, which is the wiki section of a big community website called **Bulbagarden**. It compiles data from many other reliable sources such as the Pokémon Official Website.

DATA PREPARATION

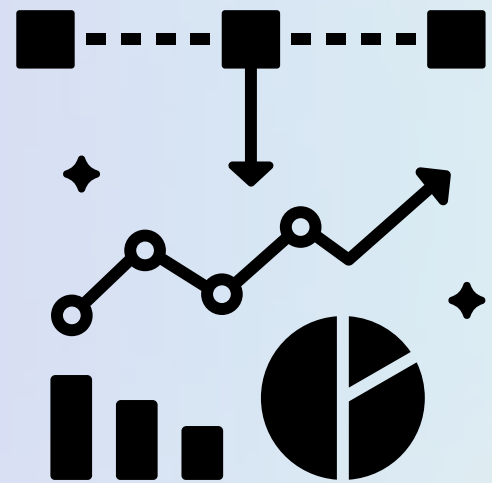

CONCEPTUAL DATA MODEL

DATA CHARACTERIZATION

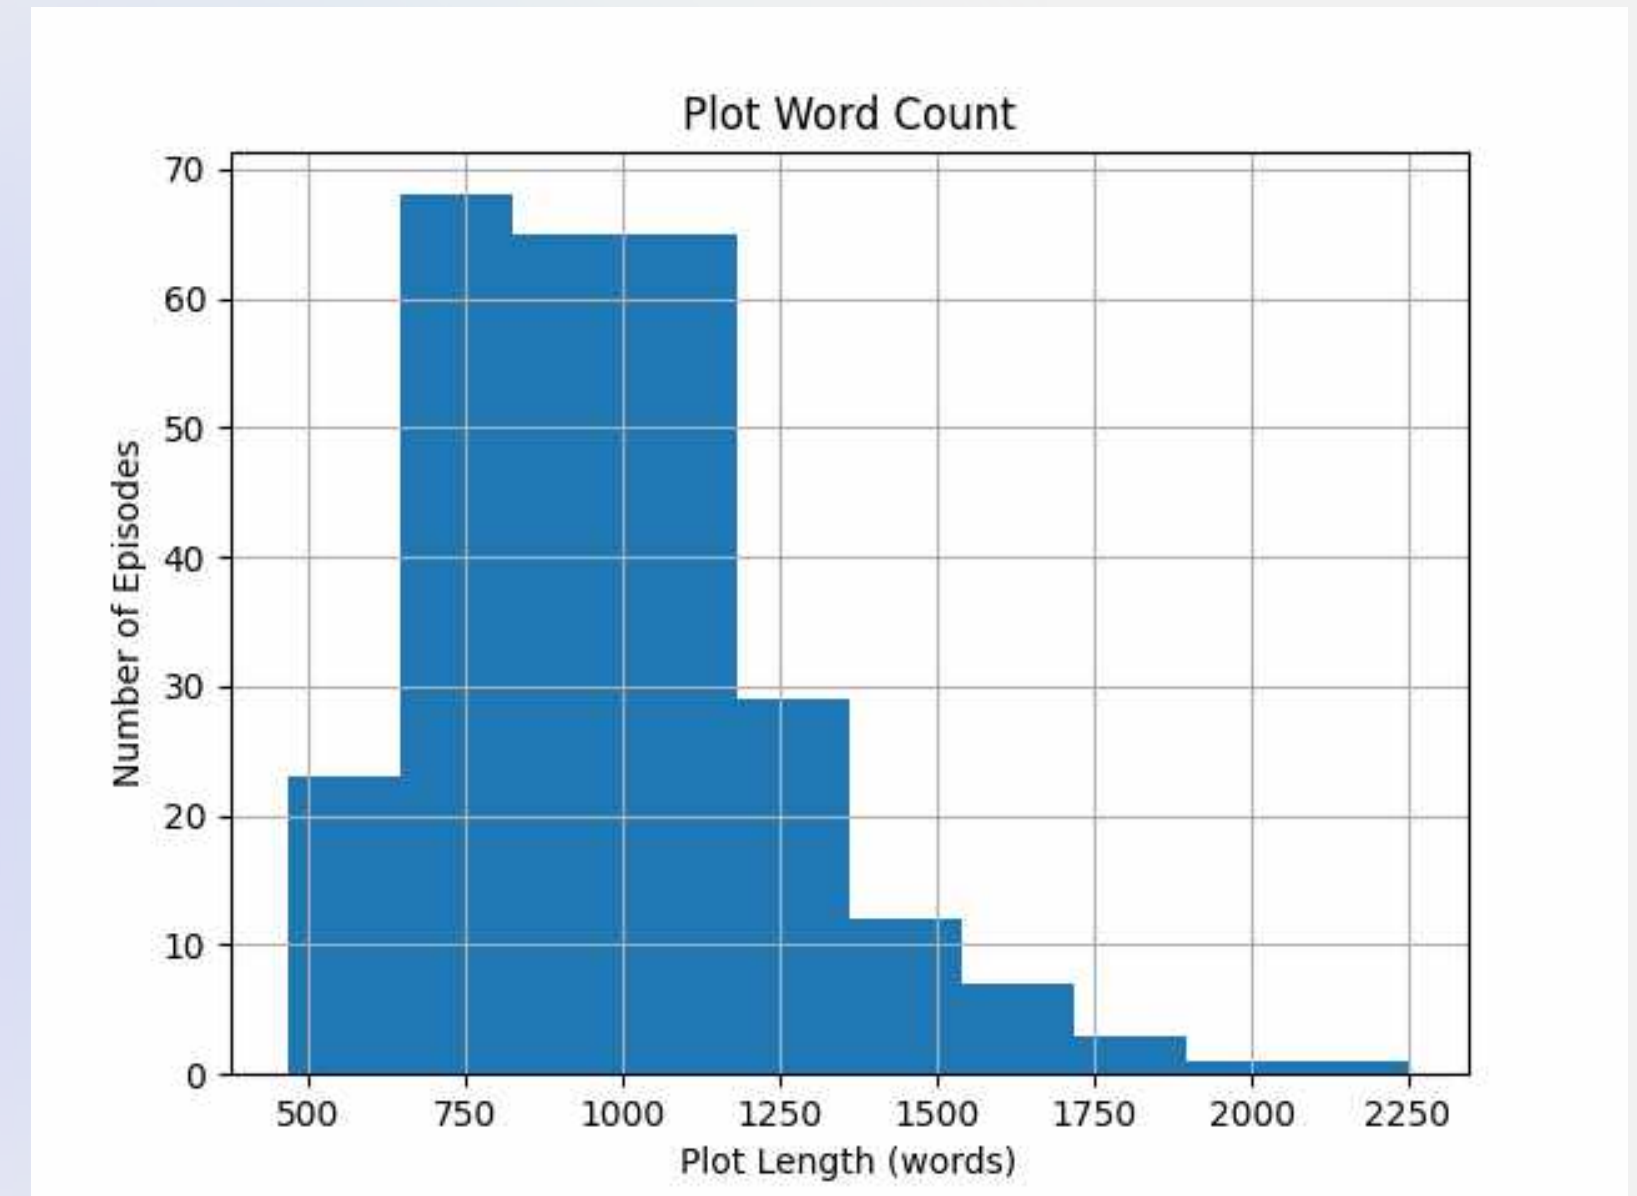

We made some plots to better understand the information that can be retrieved by our system

EPISODE WORD COUNT

- X-axis is the **number of words per episode**
- Y-axis is the **number of episodes that has the word count number.**

From this graph we can infer the following:

- Words distribution fairly consistent;
- Most of the episodes have between ~600 and ~1375 words;

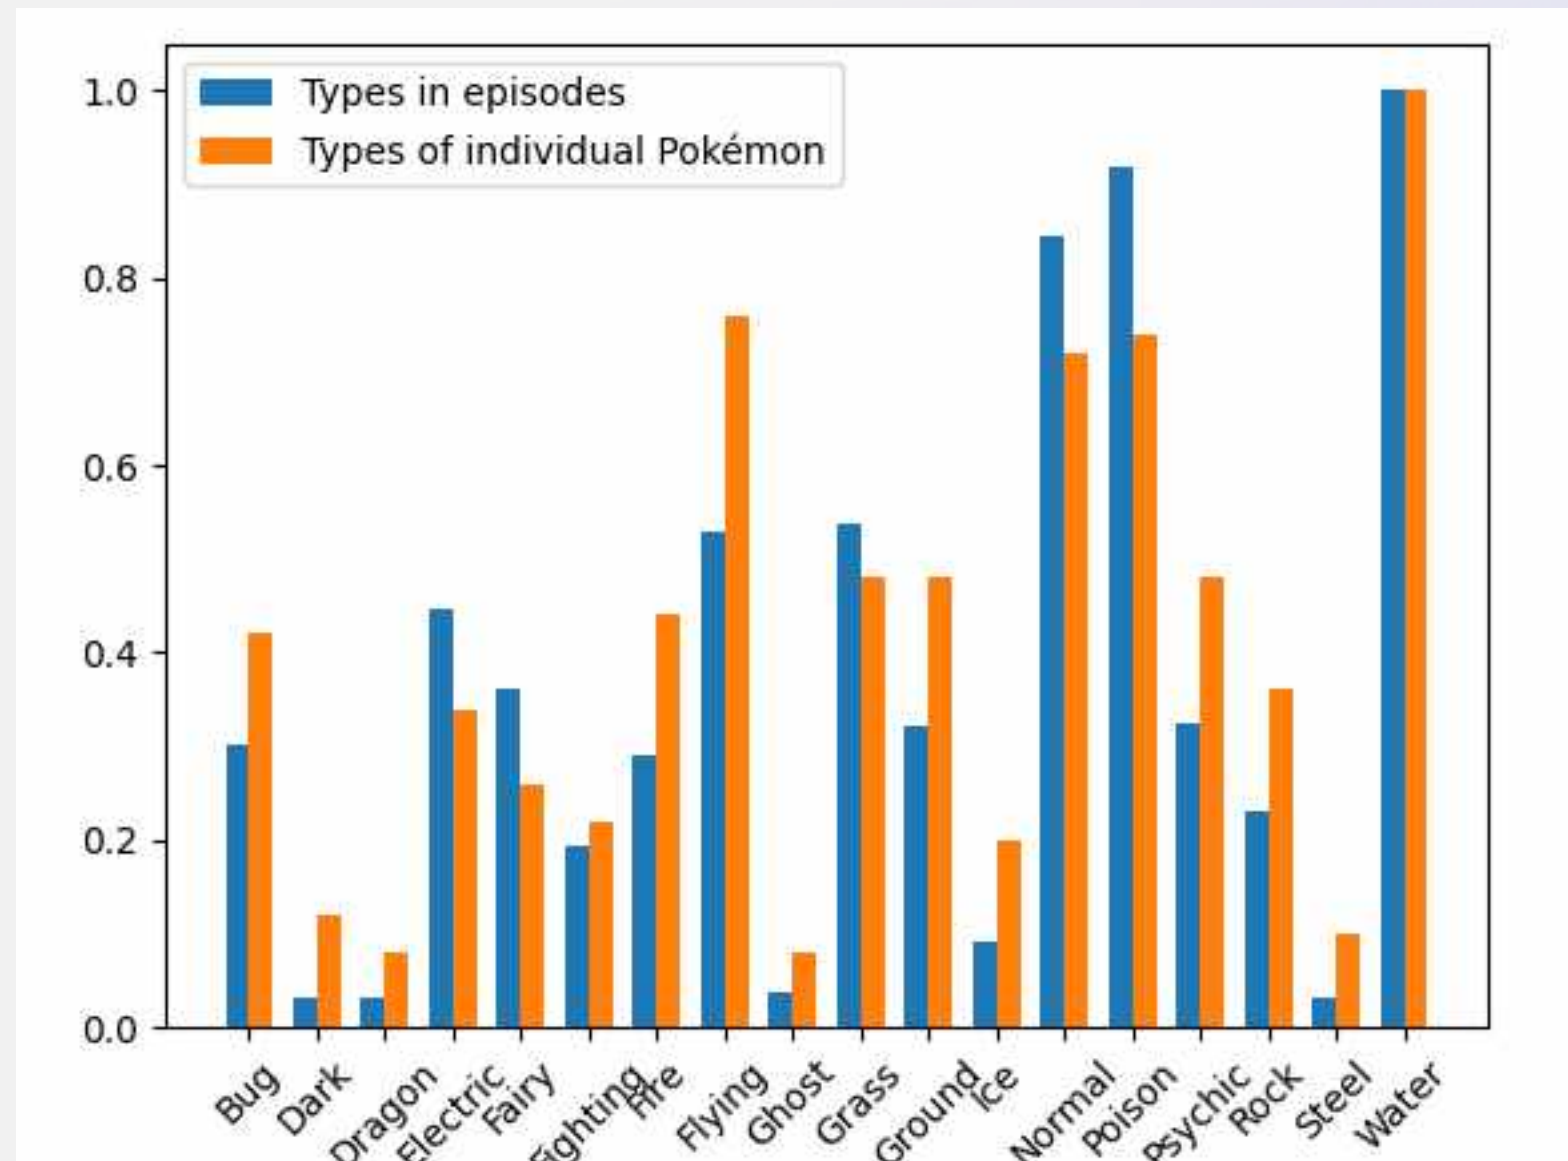

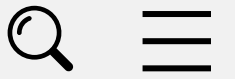

WORD CLOUD

Concentration of words that commonly appear considering all the episodes.

- Main characters and show-specific terms have the highest frequency (“Ash”, “Brock”, “Misty”, “Pikachu” and “Pokémon”, “Team Rocket”, “Jessy”, “James”)
- Verbs are common - a plot is described using a series of actions
- Show-specific themes (“**friendship**” and “**everyone**”)
- Pokémon battle words (“attack”, “battle” and Pokémon moves)

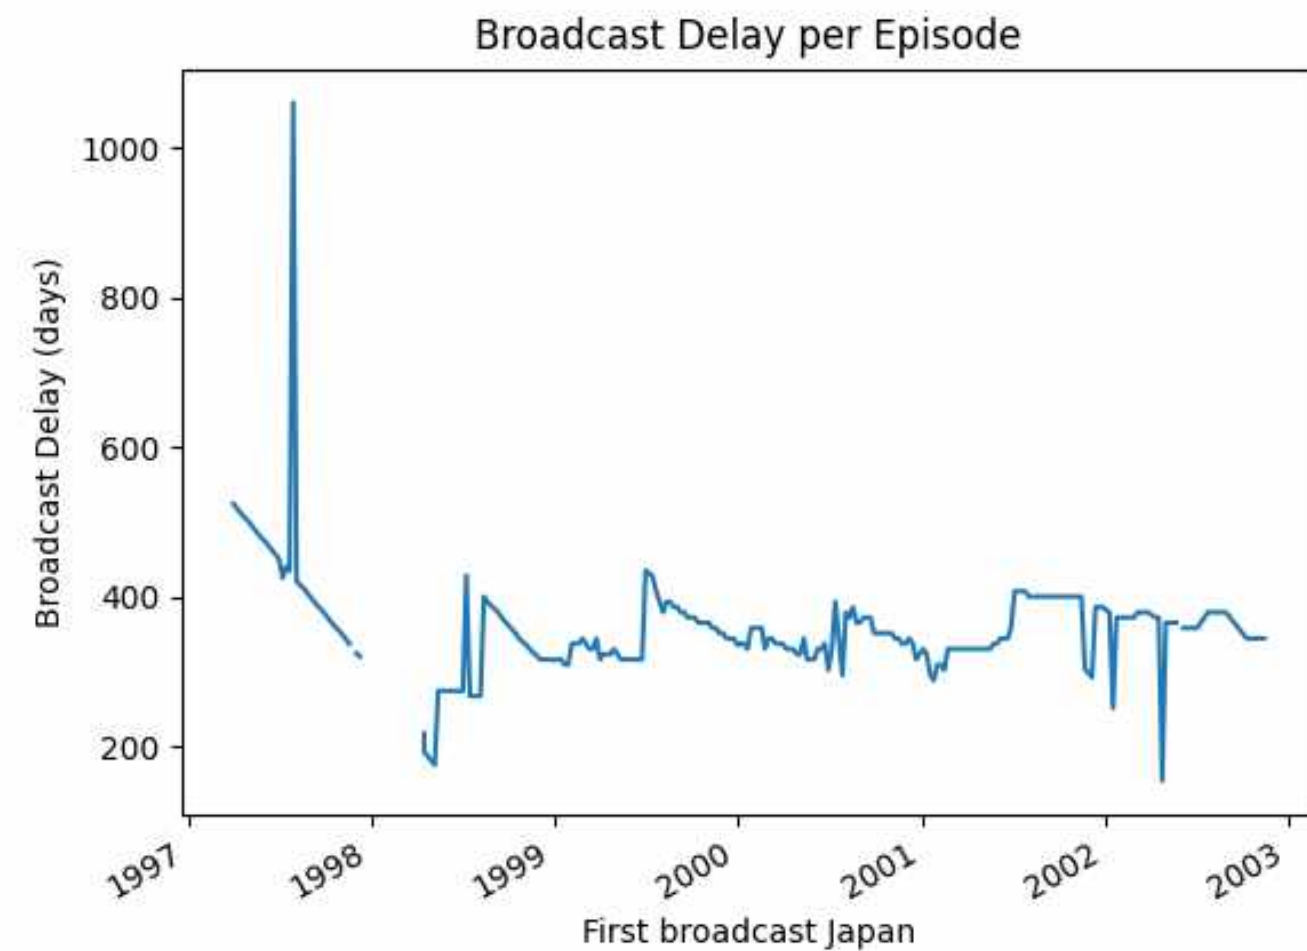

POKÉMON TYPES

- Distribution of **Pokémon type appearances in the episodes** compared to the **total number of existing Pokémon in the universe for the generations I and II**.
- The graph was normalized to a scale between 0 and 1.
- Some cases of over-representation in the types can be explained easily with examples such as Ash's Pikachu, a main character who often appears.

BROADCAST DELAY BETWEEN JAPAN AND USA

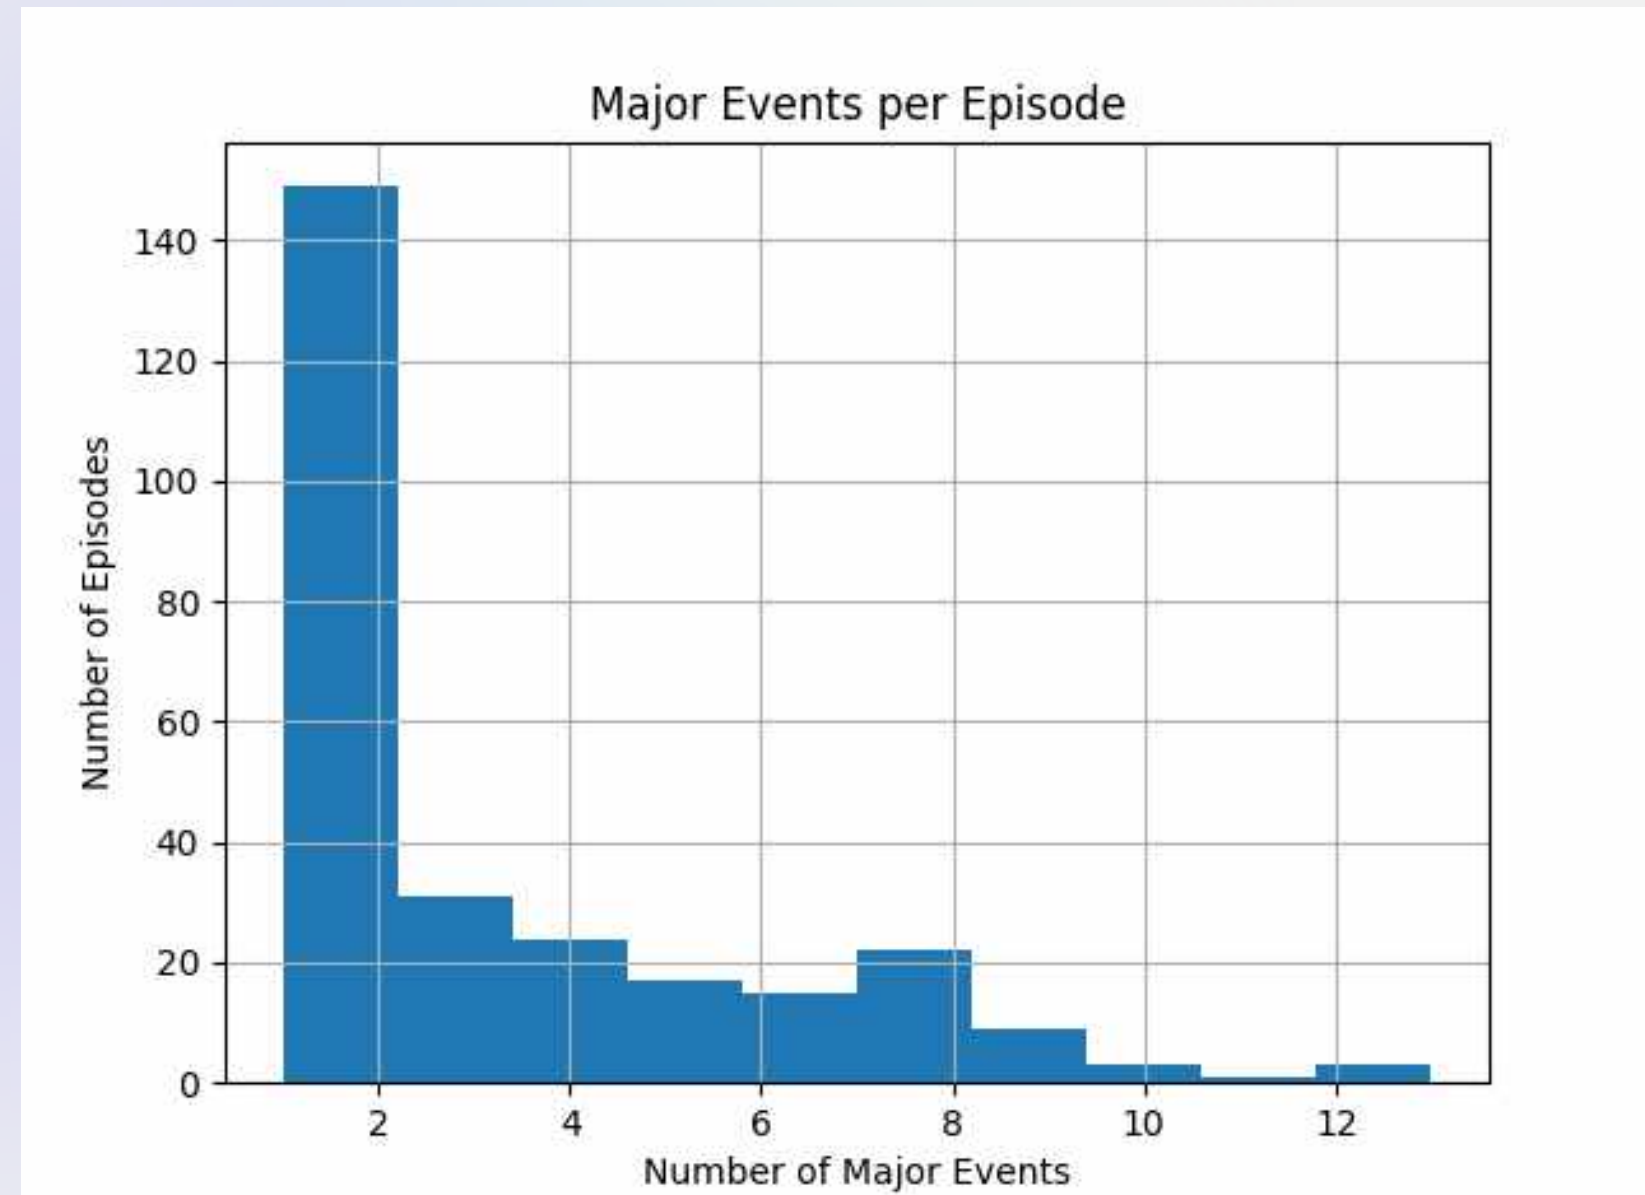

The plot shows the number of days between the show's air dates in Japan (source) and the USA.

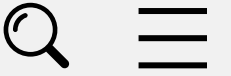

A trend of shortening the delays due to the franchise's increasing popularity;

Allows us to spot some outliers like episodes that took much longer to broadcast in USA;

NUMBER OF MAJOR EVENTS P/ EPISODE

- Majority of episodes has only one event, while a few have many more, indicating that they are more relevant to the series' overarching narrative.

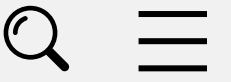

Future Work

- Information search system to handle search tasks

- “episode with James and Professor Oak”
- “episode in which Ash battles Jessie”
- “episodes in which a Water-type Pokémon is caught”

- Provide clear visualizations of the data obtained from the system

- Create an engaging and user-friendly experience
